SOME time ago Fenestra introduced a new design in Steel Casements. In this new type a horizontal ventilator tilts inward at the sill, while immediately above, side hung swing leaves open out. This window has since been used extensively by architects, in apartment and hotel work. Some of the advantages to tenants and owners include:

1. Minimum fresh air ventilation without direct drafts, in cold or stormy weather. The Fenestra windguard at the sill deflects air currents upward toward the ceiling.

2. Maximum ventilation for mild or sultry weather. Both the vertical swing leaves and the horizontal windguard may be opened wide.

3. According to wind direction, swing leaves may be set to deflect breezes into the room, or to prevent direct drafts.

4. The Fenestra windguard provides safety for children, practically eliminating the danger of falling out.

5. Washed entirely from inside the room, the Fenestra Casement eliminates the hazards of outside cleaning.

6. A touch of the finger opens or closes the Fenestra Steel Casement. No warping swelling or sticking. Hinges have bronze bearings.

7. Design of weathering sections and cam-action locking devices, with accurate workmanship, make Fenestra Casements weathertight, dispensing with the need for weatherstrips.

8. Narrow frames and muntins admit additional daylight—make rooms cheerful even on dull days.

9. Small, sparkling panes and fine hardware fittings add beauty, both inside and out.

10. When equipped with Fenestra Screens, the swing leaves are operated through the screens without touching them.

... Fenestra Casements are low in first cost; and additional economy is effected by savings of installation labor and materials on the job—these windows arrive COMPLETE, fitted, hinged, hung, painted. Inside trim over the head of the casement, and along the jambs, is frequently omitted, resulting in an appreciable saving.

+ + +

Fenestra Casements are made by America's oldest and largest steel window manufacturer, Detroit Steel Products Company. General offices, 2250 East Grand Boulevard, Detroit. Factories in Detroit, Cleveland, and Oakland. Local offices in 217 cities.
